Using ProQuest Research Library

Basic Search: Type your search terms into the white box, then click the box on the right. This takes you to the results page that lists all of the related articles. If your search term has more than one word, try enclosing "it in quotation marks" to create a phrase. This way, only results that include that phrase are included.

Too few results? Broaden your search by combining search terms with OR.

"Graves' Disease" **OR** Hyperthyroidism will return many more results than just the term Graves' disease alone.

August 31, 2016

Too many results? There are ways to refine your search. Look to the right of the Basic search results – there are several items listed that will narrow your results. The most helpful are: full text, source type, and publication date. Also, consider narrowing your search by modifying the original terms. Combining terms with **AND**, such as "learning styles" **AND** "post-secondary," will return more targeted results. Use the Advanced Search function to easily combine search terms.

My Research Account: Normally, when you exit ProQuest your search results are lost. With a free My Research Account, you can save your results for later use. Find this under the silhouette at the top.

APA Citation: ProQuest will create your APA citation for you. After you open an individual result, click on the Cite button found on the right side, under the 'Download PDF" button. The default style is APA - use the drop down arrow to find other styles. Then you can copy and paste the citation onto your Reference page.

Access ProQuest:

Log into your SuperMoodle account. The ProQuest link is in the eLibrary section on the right.
