References

   This page is the last page in the report and lists all the sources cited in the paper. Each type of citation, single author, multiple authors, journal article, website, etc. has a specific format that must be used. Each entry in the References page must have a corresponding in-text citation in the body of the paper.

Basic Rules

- This is always the last page of the report.
- Center the word References at the top of the page.
- List author's names alphabetically by last name (last name, first initial).
- If there is not a named author listed for a webpage, you may need to use a corporate or government author or put the title in the author place.
- All lines after the first line are indented in a "hanging indent"
- If no publication date is given, use (n.d.) in its place. Do not use the date of access.
- Only use retrieval dates if the source could change, such as Wikis.
- Double space each citation

Note:

Reference pages are different from Bibliographies. A bibliography includes citations for <u>all</u> of the sources you looked at for your project, whether or not you used the information in your paper. A reference page should only include citations for the sources that you directly used in the paper.
